## Gusts

# Hazardous Weather

Abundant moisture and instability remain across the Borderland while high pressure aloft shifts just to our east. Scattered showers and thunderstorms will develop across the area. The rain will begin early afternoon over the mountains and then to other areas by late afternoon and evening. A few of these thunderstorms could produce heavy rain and local flooding. Temperatures will remain near normal.

# Hazardous Weather

Low clouds developing south of the region could make a run for portions of the southern South Plains and low Rolling Plains around daybreak. Otherwise, storms developing across New Mexico this afternoon will more or less remain there, though a few stray storms could approach the western South Plains this evening/tonight. Another seasonably warm day is on tap.

Scattered to numerous thunderstorms will develop over the higher terrain of west Texas and southeast New Mexico this afternoon and evening, with isolated storms spreading into the western Permian Basin and lower Trans Pecos tonight. Heavy rainfall will be possible, as will localized flash flooding. Gusty winds and frequent cloud to ground lightning strikes will also accompany the stronger storms.

# Hazardous Weather

Isolated showers and a few thunderstorms will be possible today. Any activity should quickly diminish from east to west during the afternoon. Breezy conditions are expected, especially across the Coastal Plains. For beach goers, a Moderate Risk for Rip Currents is expected today and will likely continue through the week.

Isolated thunderstorms will remain possible across the eastern portions of north Texas today. Otherwise, conditions will be seasonably hot and breezy with high temperatures in the 90s and winds out of the south around 15 MPH.

# Weather Warning/Advisories Issued

DATE	WARNING TYPE	LOCATION
